- 2023 - 2027
AZAD UNIVERSITY
Computer Science

PERSONAL PROFILE

Detail-oriented Front-End Developer with strong experience building responsive, user-focused web applications using JavaScript, TypeScript, React, and Next.js. Passionate about creating clean, maintainable code and delivering seamless user experiences across modern browsers and devices. Skilled in translating design concepts into high-performance interfaces and collaborating effectively within team environments using Git-based workflows. Continuously learning and adopting best practices in front-end architecture, performance optimization, and scalable component design. Committed to writing efficient, reusable code that supports both user needs and business goals.

TECHNICAL EXPERIENCE

FRONTEND DEVELOPER | 2025 - 2026

Bankist App

- Developed a digital banking interface with account login, balance tracking, and transaction history
- Implemented array methods (map, filter, reduce) to process and display financial data dynamically
- Built features like money transfers, loan requests, and account closure with input validation
- Used advanced DOM manipulation and event handling to create a seamless user experience

FRONTEND DEVELOPER | 2024 - 2025

Dice Game

- Built an interactive browser-based dice game with dynamic game state management
- Implemented DOM manipulation to update scores, player turns, and game status in real time
- Developed game logic including win conditions, score holding, and turn switching

FRONTEND DEVELOPER | 2023 - 2024

Guess My Number

- Developed an interactive number-guessing game with real-time user feedback
- Implemented game logic including random number generation, score tracking, and win/lose conditions
- Used DOM manipulation to dynamically update messages, styling, and game state
- Added input validation and reset functionality to improve user experience
